PRESS KIT · NOVEMBER 2026

Prevz — the iPhone app that ranks your published posts

Prevz builds your Instagram top nine from the posts you actually published, ranked by one metric — likes, saves or comments. Not a camera-roll collage: a ranking you can state.

The story

Every December Instagram fills with nine-post grids, and the ritual has never had an official feature behind it. Existing tools ask people to pick nine photos by hand, which produces a mood board rather than a ranking. Prevz takes the opposite route: with the user's permission it reads the posts they published, ranks them on a single metric, and exports the card in the two sizes Instagram actually uses.

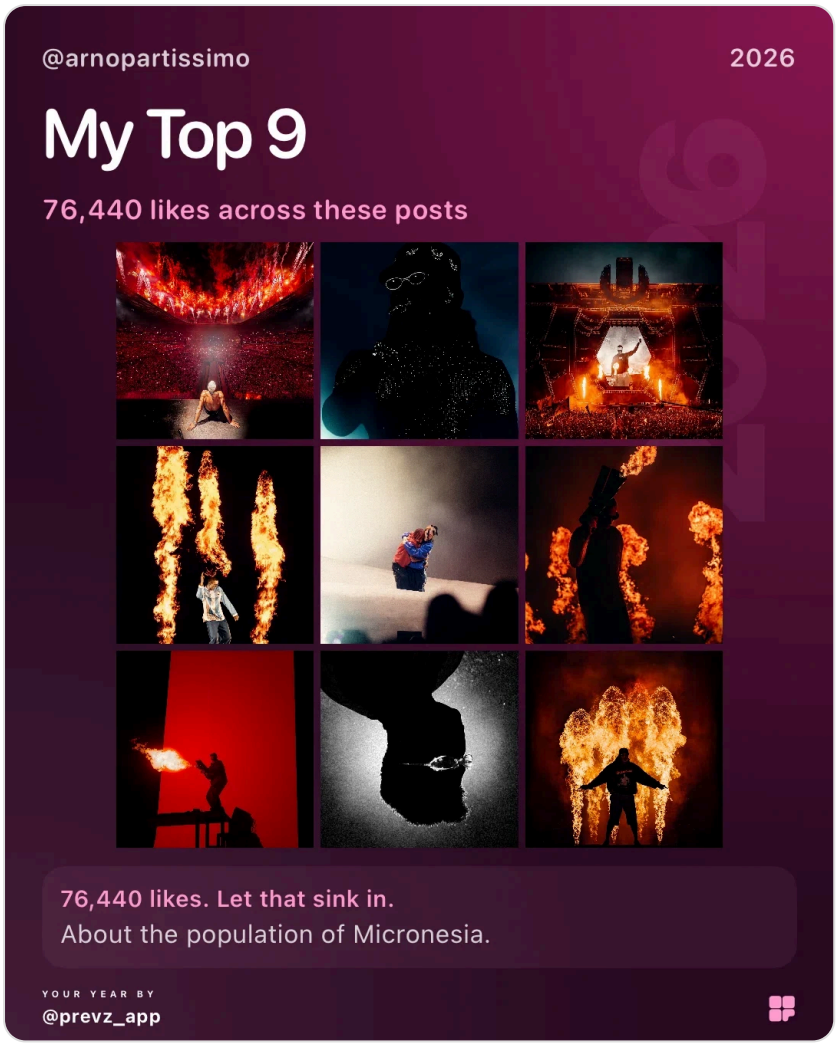
Key facts

Product	Prevz — Instagram top nine card, ranked from published posts
Platform	iPhone, iOS 18 or later
Status	TestFlight beta open to press; App Store release targeted for December 2026
Price	Free to install; optional subscription for AI captions
Data	No password stored; optional read-only access to a Creator or Business account
Company	Independent studio. Not affiliated with Instagram or Meta.
Contact	hello@prevz.app

What is fair to write

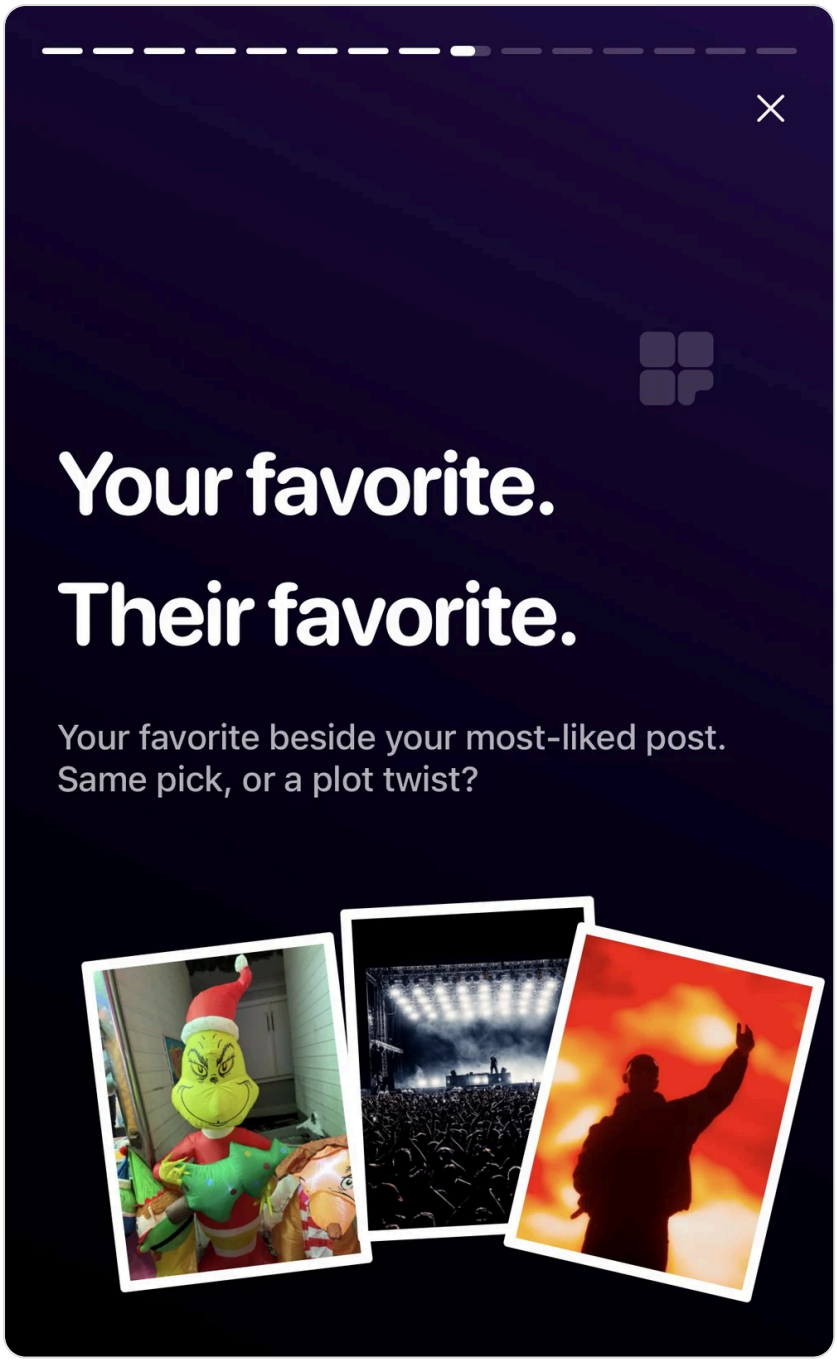
> Instagram does not publish top nine statistics, and neither do we. Any number describing the trend — including figures printed on competitor sites — comes from the tools themselves, not from Instagram. Ask us for a figure and we will tell you its source, or say that it does not exist.

Screens



Finished card: nine published posts, total likes, handle, year.

Reels recap: year totals, then the most viewed Reel.



Story screen: your favourite beside your most-liked post.

Press access

No public TestFlight link. Write to hello@prevz.app from a professional address and we send an invitation to your Apple account within one working day.
